

CAMS Enterprise™ is perfect fit for East African university seeking safe, reliable, easily installed academic ERP

St. Louis — October 20, 2010 — As a relatively young university with limited financial resources, Africa Nazarene could not afford to make a mistake in its selection of a campus-wide automated management solution. Buying an academic Enterprise Resource Planning — or ERP — system can be a high-stakes venture, often with large investments and futures on the line.

Africa Nazarene University is a faith-based university located near Nairobi, Kenya. In 2004, the school was the first customer outside North America to select Three Rivers Systems CAMS for Windows ERP system. Today, CAMS is in operation on five continents.

Last year Africa Nazarene administrators realized the university had outgrown its system, and after a thorough, competitive search the school selected Web-based CAMS Enterprise™ to replace it.

Even in Kenya, stories about five-year implementations, huge cost overruns and reliance on expensive consultants to keep conventional university ERP systems running were well known. So when Africa Nazarene University completed its new fully integrated, Web-based CAMS Enterprise system implementation in just one year and on budget, the IT team felt its choice was vindicated.

According to Deputy Vice Chancellor Academic Mark Pitts, chair for Africa Nazarene's database selection and implementation team, "Three Rivers Systems was sensitive to our special needs in the African context. They spent the time needed to customize our system prior to implementation — and even more importantly, following installation — to assure CAMS Enterprise met our expectations."

Joseph Chacha, Africa Nazarene senior Information technology assistant and CAMS manager, considers CAMS Enterprise an ideal IT solution. "The implementation went very smoothly. CAMS Enterprise is an easy-to-use system that offers a great deal of flexibility."

Such flexibility is critical to cost control in an environment where funds or time cannot be wasted.

CAMS Enterprise is a unique solution for higher education institutions of all sizes. Totally browser-based and designed from the ground up to leverage the Web, it is unlike older client-server systems that use the Internet as an afterthought. In addition, CAMS is a single system that combines all major student functions, from admissions to online learning to alumni relations in a secure single, shared database.

As a result CAMS Enterprise is a system requiring minimal maintenance as it provides information anywhere anytime, and its complete integration yields unparalleled productivity and flexibility. Also, because IT staffing requirements are so much less than with competitive client-server legacy products, CAMS Enterprise allows Africa Nazarene University to deliver world-class educational tools easily and affordably.

Working as a single solution rather than an interfaced system, CAMS Enterprise has many advantages:

- ✔ All functions look, feel and operate the same way so users can master them quickly.
- ✔ Multiple interfaces are eliminated to increase productivity and reduce the need to acquire additional hardware, which expedites implementation.
- ✔ Reporting is easy to use, flexible and doesn't require assistance from IT.
- ✔ It can be easily and efficiently scaled for growth.

Three Rivers Systems Inc. President Amir Tajkarimi is pleased the university's CAMS Enterprise implementation is completed. "Now Africa Nazarene can start enjoying the benefits of our safe, dependable solution and its predictable total cost of ownership," he said.
