## Three Rivers Systems launches new release of CAMS Enterprise™ that works with Microsoft Windows Server 2008 Release 2

St. Louis — February 4, 2010 — [Three River Systems Inc.](#) today announced it has launched a new version of its [CAMS Enterprise™](#) application that works with Microsoft Windows Server® 2008 R2 to offer customers enhanced security, as well as innovative user interface features and reliability improvements.

Developed from the ground up with Microsoft Internet technologies, [CAMS Enterprise](#), is a highly scalable, comprehensive academic management system that is quick to implement and easy to use. While others may claim they are completely integrated, CAMS Enterprise is the only system truly integrated around a single Microsoft SQL database, now Windows Server® 2008 R2. As the only 100-percent Web-based academic Enterprise Resource Planning solution built exclusively for colleges and universities, it is considered the smartest choice for higher education.

With CAMS Enterprise, all academic institutions — small, medium and large — can communicate and manage the entire student lifecycle from prospect to alumnus while enjoying annual IT savings as high as 75 percent.

Three Rivers Systems unique solution connects prospective students, current students, faculty and alumni through portals to manage admissions, registration, student records, financial aid, HR/payroll, fundraising, alumni relations and much more. Built with pure Microsoft technologies, only CAMS Enterprise™ ensures compatibility, ease of use, user familiarity, efficient use of resources, scalability and complete automation.

“Our Independent Software Vendor community is alive with innovation, and we’re committed to helping our partners drive the next generation of software experiences,” said Ross Brown, Vice President of ISV and Solutions Partners for the Worldwide Partner Group at Microsoft. “Adding compatibility for the latest Microsoft operating systems helps ISVs to stay ahead of the competition and give their customers access to cutting-edge technologies.”

“We are excited about launching this new version of CAMS Enterprise,” Three Rivers Systems President and Founder Amir Tajkarimi said. “Making our application compatible with Microsoft Windows Server 2008 R2 helps us continue to offer our customers compelling benefits, including improved security and reliability features, tools to keep them connected to data, full support for multi-core processing, sophisticated management features and flexible access administration to improve mobile capabilities.”

Because CAMS Enterprise is built on mainstream Microsoft technology with accepted development standards and practices, a minimal amount of effort was required to ensure compatibility with Windows Server 2008 R2.

CAMS Enterprise consolidates multiple stand-alone systems into one solution that ensures administrators, staff, faculty and students all work with the most recent and most accurate information. By uniting administrative and academic management systems, CAMS Enterprise is the only totally Web-based, completely integrated solution for managing the entire student lifecycle.

**About Three Rivers Systems Inc.**

[Three Rivers Systems Inc.](#), the developer and service provider for CAMS, is headquartered in St. Louis and has been delivering innovative technology-driven solutions to the educational community for the past 25 years.
