Three Rivers Systems launches new release of CAMS Enterprise™ that works with Microsoft Windows® 7

St. Louis — February 8, 2010 — [Three River Systems Inc.](#) today announced it has launched a new version of its [CAMS Enterprise™](#) application that works with Microsoft Windows® 7 to offer customers enhanced security, as well as innovative user interface features and reliability improvements.

Developed from the ground up with Microsoft Internet technologies, [CAMS Enterprise](#), is a highly scalable, comprehensive academic management system that is quick to implement and easy to use. While others may claim they are completely integrated, CAMS Enterprise is the only system truly integrated around a single Microsoft SQL database, and now Windows 7 compatible. As the only 100-percent Web-based academic Enterprise Resource Planning solution built exclusively for colleges and universities, it is considered the smartest choice for higher education.

With CAMS Enterprise, all academic institutions — small, medium and large — can communicate and manage the entire student lifecycle from prospect to alumnus while enjoying annual IT savings as high as 75 percent.

Three Rivers Systems unique solution connects prospective students, current students, faculty and alumni through portals to manage admissions, registration, student records, financial aid, HR/payroll, fundraising, alumni relations and much more. Built with pure Microsoft technologies, only CAMS Enterprise ensures compatibility, ease of use, user familiarity, efficient use of resources, scalability and complete automation.

“Our Independent Software Vendor community is alive with innovation, and we’re committed to helping our partners drive the next generation of software experiences,” said Ross Brown, Vice President of ISV and Solutions Partners for the Worldwide Partner Group at Microsoft. “Adding compatibility for the latest Microsoft operating systems helps ISVs to stay ahead of the competition and give their customers access to cutting-edge technologies.”

“We are excited about launching this new version of CAMS Enterprise,” Three Rivers Systems President and Founder Amir Tajkarimi said. “Making our application compatible with Microsoft Windows 7 helps us offer our customers compelling benefits, intuitive user interfaces such as multi-touch, improved security and reliability features, tools to keep them connected to data stored on the Web, advanced graphic hardware acceleration, full support for multi-core processing, sophisticated management features, intelligent power management, flexible access administration to improve mobile capabilities.”

CAMS Enterprise consolidates multiple stand-alone systems into one solution that ensures administrators, staff, faculty and students all work with the most recent and most accurate information. By uniting administrative and academic management systems, CAMS Enterprise is the only totally Web-based, completely integrated solution for managing the entire student lifecycle.

Because CAMS Enterprise runs completely within the Web browser on the client workstation, a minimal amount of effort was required to ensure compatibility with Windows 7.
